

Setting Up the AI Development Environment

Week 1 Assignment • Task 2

Step 1: Install Python

Go to python.org/downloads and download the latest Python 3 version for your OS (Windows/Mac/Linux). Run the installer and make sure to tick 'Add Python to PATH' before clicking Install. Verify it worked by opening a terminal / command prompt and typing:

```
python --version
```

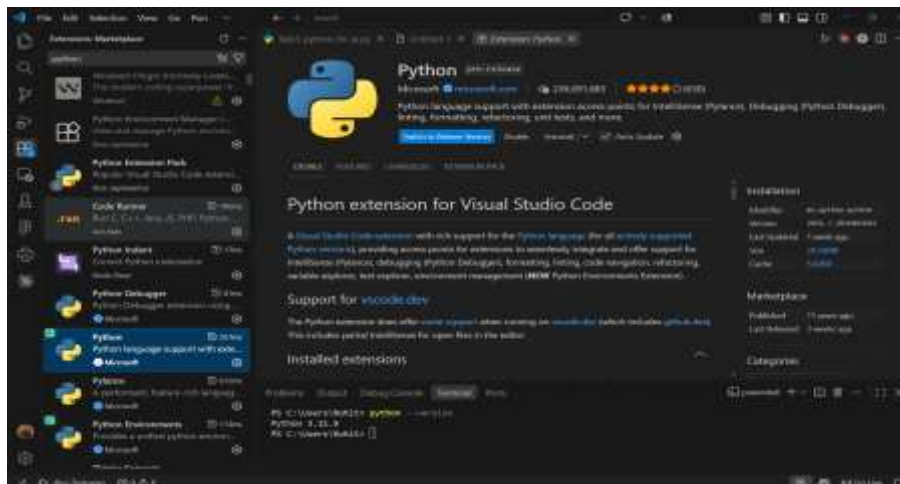

```
Problems Output Debug Console Terminal Ports

PS C:\Users\Rohit> python --version
Python 3.11.9
PS C:\Users\Rohit> 
```

Step 2: Install VS Code

Download VS Code from code.visualstudio.com and install it. Once installed, open it and install the 'Python' extension from the Extensions tab (the icon that looks like squares on the left sidebar). This gives VS Code the ability to run and debug Python code.

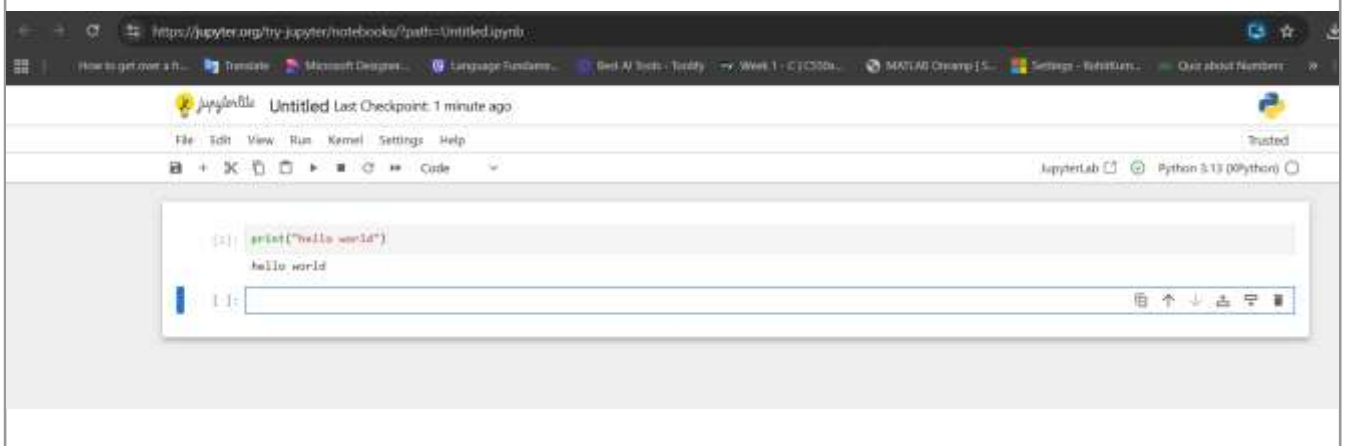

Step 3: Install Jupyter Notebook

Open a terminal and run the command below to install Jupyter:

```
pip install notebook
```

Then launch it with the command below, which opens Jupyter in your browser:

```
jupyter notebook
```

Step 4: Install Required Libraries

AI and data science work needs a couple of standard libraries. Install them with:

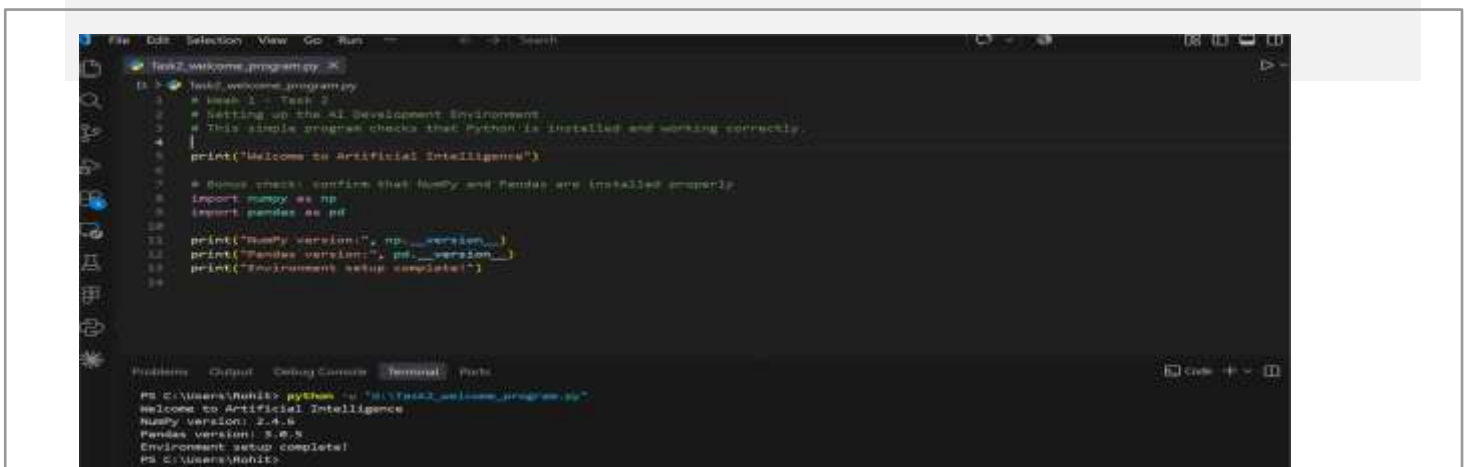

```
pip install numpy pandas
```

Step 5: Run the Welcome Program

Create a file called `Task2_welcome_program.py` with the following code, then run it in VS Code or the terminal:

```
print("Welcome to Artificial Intelligence")

import numpy as np
import pandas as pd
print("NumPy version:", np.__version__)
print("Pandas version:", pd.__version__)
print("Environment setup complete!")
```

Checklist Summary

Item	Done?
Python installed & verified	[☒]
VS Code installed with Python extension	[☒]

Jupyter Notebook installed & launched	[☒]
NumPy & Pandas installed	[☒]
Welcome program executed successfully	[☒]
